

### GIULIANO MAZZUOLI Manometro S

This titanium and carbon fiber watch is designed and handcrafted in Italy. This version is the sportier version of the original Manometro with a cylindrical case made of 40 layers of carbon fiber that has gained inspiration from the metal skeleton used by Formula 1 racers. Its 45.2-mm carbon fiber case and rubber strap give the watch a bolder, sturdy feel on the wrist, yet the titanium used reveals its sophistication and more elegant side. The case houses a Swiss-made ETA 2824/2 with a shockproof Incabloc system. The dial is carbon fiber with white markers save for the red, slightly, larger numeral 12. The large crown is located at 2 o'clock.
